

****Discovery:**** D03 — From Notes to User Stories

****Name:**** Matthew Grossman

****Date:**** 9/14/26

****AI tool used:**** Claude

****Conversation link(s):**** [paste share link(s), one per line, saying what each covered]

****Time spent:**** 30 minutes

1. What I did

- First I asked Claude for a step by step guide on how to complete the discovery.
- Then I had Claude educate me on what are user stories.
- Next, I reviewed my interview notes about Dagi Melaku's traffic tickets
- Then I created user stories based off Dagi's testimony and examples that Claude gave me (purely for inspiration.)

2. Artifact

1. As someone who's gotten a ticket, I want to know exactly how many points I get on my license, so I can ascertain how one ticket will affect my insurance premiums.

2. As someone who has gotten a traffic ticket, I want to know the exact amount I need to pay on a ticket, so I can easily decide whether fighting it off is worth it financially.

3. As someone who has gotten a traffic ticket, I want to know exactly where to pay the ticket, so I don't have to make multiple trips to resolve it.

4. As someone who received a traffic ticket abroad, I want to know if my ticket will affect my insurance or license at home, so I don't have to consult a lawyer or laws in multiple languages.

- What I didn't get— I need more user stories from the USA, because my software will be USA based. There are already so many local rules and regulations surrounding traffic tickets between counties, cities, and states. Starting beyond borders is not the best option for me.

3. Claim

- Before this week, I was confident in creating my ticket software based on my own experience. Now, I realize that I need to conduct a lot more interviews in order to create a prototype product.

4. Question

What other anecdotes can I get about traffic tickets just within our class? I feel like it's taboo to talk about, but almost everyone has an experience with citations.

5. Reflection

Before I start coding my software's foundation I need to conduct more interview in and outside of the class.
