

****Discovery:** D04 — [What Makes a PRD Strong?](#)**

****Name:** Matthew Grossman**

****Date:** 9/21/26**

****AI tool used:** Claude**

****Conversation link(s):** <https://claude.ai/share/caa6789c-6992-493b-bdbc-047dbdad6d6c>**

****Time spent:** 90**

1. What I did

- For this discovery, I found two public PRDs from well known products and I compared them side by side. This will assist me in writing out my own prd.

2. Artifact

- The two prds I examined were from Airbnb and Spotify.

Airbnb:

<https://ginger-petunia-6a1.notion.site/Product-Requirements-Documents-PRD-for-Airbnb-Total-Price-Display-b2191e85baf441ea8f565dad9649e463>

- Took 20 minutes to skim.
- First sentence:
Current State: Airbnb currently displays only the nightly rate on search and listing pages.
- **Problem:** This leads to confusion and dissatisfaction due to unexpected additional costs.
- **Opportunity:** Enhancing transparency can improve user experience and comply with various global regulations.
- What was addressed: Having prices immediately visible for the user.
- My conclusions: Very short and straightforward PRD. Explains how third party APIs were needed to display prices immediately, and laid out time to launch. Formatting is very simple for someone not well versed in software engineering and easy to digest.

Spotify

<https://assets.nextleap.app/submissions/ProductRequirementsDocument-1-588a1cc9-37e7-440e-91d4-3d74f55ee1aa.pdf>

- Took 15 minutes to skim
- First sentence: 18–24 year olds engage less than Spotify wants due to content saturation and no social interaction. Light listeners 18–34 are 33% of the user base; they disengage because of ad interruptions, difficulty discovering music, and a cluttered interface. Business value: engagement, retention, conversion. Urgency: industry CAGR of 15.4%
- **Much more measurable problem given the data. Engagement numbers are directly stated rather than comparing to vague “user experience”**
- What was addressed: How to switch around revenue generators to encourage more listening time and eventually premium subscriptions.

- My conclusions: I liked this prd much more than the airbnb one, because the problem was backed up with evidence rather than an abstract user experience.

3. Claim

- A prd must have a problem backed up by numbers and evidence in order to establish urgency and potential ROI.

4. Question

- What research and metrics can I use for my PRD? Average money spent on higher insurance after first citation? What percent of drivers fight off tickets rather than pay them?

5. Reflection

- I have been conducting interviews to get more stories and evidence about traffic tickets. After I have conducted 8-10 interviews, I will have Claude help me qualify them using a JSON so I can drive mathematical evidence out of my research.
